Drawings

Figure 9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunter et al (US 6,204,694).

Sunter et al disclose a method for LSI layout (abstract and col. 1, lines 10-14).

Sunter discloses that the load capacitance units are in the vicinity of the logic gates (col.

Art Unit: 2825

9, lines 50-60). The capacitance value of the load capacitance units is determined and

is four times or twice the value of the load capacitance (col. 11, lines 55-65).

Although Sunter et al is silent with respect to power supply capacitor cells, the load

capacitance units, which may be load capacitance gates, taught by Sunter et al (col. 9,

lines 50-60), correspond to power supply capacitors.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Caridad M. Everhart whose telephone number is 703-

308-3455. The examiner can normally be reached on Monday through Fridays 830-

500.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Matthew S. Smith can be reached on 703-308-1323. The fax phone

numbers for the organization where this application or proceeding is assigned are 703-

305-3431 for regular communications and 703-305-3431 for After Final

communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

0956.
